Beyond GDP Newsletter – December 2015 edition out now

Green Economy and Green Growth are two terms often used in policy debates. However, what is behind these concepts? How can policy-makers identify progress over time?

The December 2015 edition of the Beyond GDP Newsletter sheds light on indicators for a greener economy and for green growth. It discusses the Green Economy Progress Index from UNEP and the OECD Green Growth Indicators, as two examples in the landscape of current approaches at international and EU levels.

Since early 2014, IEEP has been responsible for producing DG Environment's quarterly Beyond GDP newsletter. The newsletter provides information about important developments related to measuring progress, true wealth and the well-being of nations. You can subscribe to the newsletter [here](#).
